EDUCATION

Amity University Mohali

Bachelor of Technology in Computer Science and Engineering (Specialization: AI/ML)

- Ongoing academic performance with a current cumulative GPA of 7.31/10.

SAS Nagar, Punjab

2024 – 2028 (Expected)

EXPERIENCE

IIT Jammu Summer School

Summer School Intern

- Developed and deployed application workflows leveraging Python, Machine Learning, and Generative AI within an intensive engineering program.
- Engineered automated operational pipelines integrating n8n workflows, external REST APIs, and third-party AI services.
- Implemented custom Generative AI applications employing Large Language Models (LLMs), structured prompt engineering, and Hugging Face model integrations.
- Designed and tested multi-agent AI architectures and autonomous agent frameworks through practical, locally deployed prototypes.
- Orchestrated a GenAI capstone project focused on agent-based systems and workflow automation, integrating vector databases and modern LLM orchestration tools.

Jammu, India

June 2026 – July 2026

Hanlaban.com

Shopify Developer (Freelance)

- Developed a dynamic mega menu for a Shopify storefront using Shopify Liquid, HTML, CSS, and JavaScript.
- Built a configurable admin interface enabling non-technical users to modify navigation hierarchies without editing code.
- Customized Shopify theme components to improve codebase maintainability and storefront user experience.
- Collaborated directly with business stakeholders to implement technical requirements and deliver production-ready features.

Remote

June 2026 – Present

PROJECTS

CodeLens AI | *React 19, TypeScript, Node.js, Express, Gemini API, Vite* | [GitHub](#) | [Live](#)

July 2026

- Engineered a full-stack AI platform that analyzes public web signals to infer technology stacks, system architectures, database models, and personalized learning roadmaps.
- Built a React 19 and TypeScript frontend with interactive dashboards, shareable reports, and Mermaid.js-based dynamic architecture visualizations.
- Integrated Google Gemini API with a custom heuristic inference engine, designing fallback execution protocols for local execution without external API services.

Sun Tzu AI | *n8n, Docker, Gemini API, Telegram API, LinkedIn UGC API* | [GitHub](#)

July 2026

- Designed and built an AI-powered automation workflow that researches trending topics, generates LinkedIn posts and context-aware images, and runs content through an approval pipeline.
- Orchestrated complex multi-step processes by integrating Google Gemini, LinkedIn APIs, Telegram Bot API, and Google Sheets within asynchronous n8n workflows.
- Containerized the automation stack using Docker and set up webhook routing, Cloudflare tunnels, and media publishing endpoints.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL (Basic)

Frameworks & Libraries: React, Next.js, Express.js, Tailwind CSS, Shopify Liquid, n8n

Developer Tools & Platforms: Git, GitHub, Docker, Vercel, Shopify CLI, Google Apps Script, REST APIs, JSON

AI & Automation: Workflow Automation, AI Agents, Prompt Engineering, Large Language Models (LLMs), AI API Integration

Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), System Design, API Integration, Full-Stack Development
